Actor Actions	System Responses	Server Responses
1. Click the Add Purchase Information button	2. Display Add Purchase Screen	
3. Type in purchase information and press the add button	4. Read the information and send it to the server	5. Update the database with the new information and send confirmation to client
	6. Display confirmation of adding	

Screens are shown in the testing pictures.

2. Data access is now all sent to the serve that is run through the ProductServer.java

3. The protocol for the client is to send information to the server in the form of a command such as PUT along with any needed information after such as the ProductID and other member variables. The protocol for the server is to always be listening for the commands, and then when issued them to enact the changes to the database and then send a confirmation back to the client.

4 and 5. Implemented and tested. Pictures in the test folder.
